

HASEEB

Computer Science Student | AI/ML & Full-Stack Development

Lahore, Pakistan | 0309-1688369 | safderhaseeb46@gmail.com

linkedin.com/in/haseeb-b36aa632a | github.com/haseeb356 | haseeb-tech-dev-13.vercel.app

SUMMARY

Computer Science student at UET Lahore with hands-on experience building machine learning, generative AI, and full-stack applications using Python, React, FastAPI, Flask, and modern ML frameworks. Experienced in developing, evaluating, and deploying practical software solutions through independent and collaborative projects, with a focus on explainable AI and LLM-powered tools. Seeking AI/ML, AI Engineering, or Full-Stack Development internship opportunities.

EDUCATION

BS Computer Science — University of Engineering and Technology (UET), Lahore

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL

Machine Learning: Machine Learning, Scikit-learn, TensorFlow, SHAP, Explainable AI (XAI)

Generative AI: Large Language Models (LLMs), Prompt Engineering, Google Gemini API, IBM Watson NLP

Web & Backend: React, Vite, HTML, CSS, FastAPI, Flask, Node.js, Express.js, REST APIs

Databases: SQLite, PostgreSQL

Tools: Git, GitHub, VS Code, Jupyter Notebook, Postman

PROJECTS

AI Student Success Predictor | *Python, Scikit-learn, FastAPI, React, Pandas, NumPy, SHAP*

GitHub: github.com/haseeb356/ai-student-success-predictor

- Built a full-stack machine learning application predicting student outcomes (Dropout, Enrolled, Graduate) through an end-to-end pipeline covering data cleaning, exploratory data analysis, and statistical hypothesis testing (ANOVA, Chi-Square).
- Engineered features and trained/compared Logistic Regression, Random Forest, and Gradient Boosting classifiers, applying SHAP for model explainability.
- Developed a FastAPI backend to serve predictions and a React dashboard for interactive visualization of results.

Agenda Craft AI | *Node.js, Express, React, TypeScript, Google Gemini API*

GitHub: github.com/haseeb356/Agenda-Craft-AI

- Developed an AI-powered meeting agenda generator that analyzes uploaded documents (via Multer and Mammoth) and produces structured agendas with summaries, stakeholders, and action items.
- Integrated the Google Gemini API with prompt engineering to generate structured JSON output, including intelligent time allocation for meeting segments.
- Built the application across an Express.js backend and a React frontend.

Multi-Agent Research Intelligence System (Team Project) | *Python, Streamlit, Google Gemini API, arXiv API*

GitHub: github.com/Abdul-Rehman131/multi-agent-research-ai

- Collaborated on an AI-powered multi-agent platform that searches, analyzes, and summarizes academic papers using the Gemini API and arXiv API, including literature review and research gap analysis.
- Served as Project Manager, coordinating planning, task execution, and delivery across the team.

CERTIFICATIONS

- IBM AI Developer Professional Certificate — IBM (Coursera)
- Supervised Machine Learning: Regression and Classification — DeepLearning.AI & Stanford University (Coursera)
- Google AI Professional Certificate — Google (Coursera)
- Generative AI for Software Development — DeepLearning.AI (Coursera)
